# Introduction to the Idaho Occupational Wage & Employment Survey

The Idaho Occupational Wage & Employment Survey presents occupational employment statistics (OES) data collected under the auspices of U.S. Bureau of Labor Statistics (BLS). The standardized methodology allows for cross-state comparison.

The data used in this publication is collected over a three-year span, then the wages are aged, or adjusted, to reflect the same time period by using the BLS Employer Cost Index.

This wage publication consists of wage tables for each of the wage regions shown below, along with a cross regional index.

- ◊ **State of Idaho**—all 44 Idaho counties
- ◊ **North Idaho**—Benewah, Bonner, Boundary, Clearwater, Idaho, Kootenai, Latah, Lewis, Nez Perce, and Shoshone Counties
- ◊ **Boise City Metropolitan Statistical Area (MSA)**—Ada and Canyon Counties
- ◊ **Southwest Idaho, excluding Boise City MSA**—Adams, Boise, Elmore, Gem, Owyhee, Payette, Valley, and Washington Counties
- ◊ **South Central Idaho**—Blaine, Camas, Cassia, Gooding, Jerome, Lincoln, Minidoka, and Twin Falls Counties
- ◊ **Pocatello MSA**—Bannock County
- ◊ **Eastern Idaho**—Bear Lake, Bingham, Bonneville, Butte, Caribou, Clark, Custer, Franklin, Fremont, Jefferson, Lemhi, Madison, Oneida, Power, and Teton Counties
- ◊ **Cross Regional Index**—average wage statewide by MSA, and by region

### Occupational Classification System

These OES survey results are employment and wage estimates using the Office of Management and Budget's *Standard Occupational Classification (SOC)* system.

The SOC system was implemented in 2000, and data collected prior to 2000 are not directly comparable with previous years' OES occupational employment and wage data.

A List of Occupations (Appendix A, A1-A13) provides an alphabetical listing of occupations to aid in locating specific job titles.

### Occupations Included in this Survey

The OES survey covers the 22 major occupational groups included in the survey:

- Management
- Business and Financial Operations
- Computer and Mathematical
- Architecture and Engineering
- Life, Physical, and Social Science
- Community and Social Services
- Legal
- Education, Training, and Library
- Arts, Design, Entertainment, Sports, and Media
- Healthcare Practitioner and Technical
- Healthcare Support
- Protective Service
- Food Preparation and Serving Related
- Building and Grounds Cleaning and Maintenance
- Personal Care and Service
- Sales and Related
- Office and Administrative Support
- Farming, Fishing, and Forestry
- Construction and Extraction
- Installation, Maintenance, and Repair
- Production
- Transportation and Material Moving

Occupations specific to the military are excluded from the survey. Job definitions for the occupations included in this survey are published separately in the *Glossary of Standard Occupational Classification (SOC) Job Titles and Definitions*. The Glossary can be obtained from Idaho Commerce & Labor by calling (208) 332-3571 or 1-800-772-2553 or emailing Cindy.Paul@cl.idaho.gov

## Other Definitions

---

### Aged

The OES terminology for adjusting the prior wage information. The change in employer costs, measured by the BLS Employer Cost Index (ECI), is used to adjust wages to current dollar value.

### Average Wage

The average (mean) data reflect a *weighted mean*. To derive the weighted mean, the hourly wage rate of each employee in a specific occupation is totaled and then divided by the number of employees. Unusually high or low wages can inflate or deflate the average wage.

### Employer Cost Index

A quarterly report from the U.S. Department of Labor's National Compensation Survey that quantifies changes in employee compensation in the form of wages and benefits. It is considered by some investors to be an indicator of inflation.

### Employment

The estimate of the total number of workers employed in a specific occupation. This is *not* the number of employees from companies responding to the wage survey.

### Entry Wage

The average wage of the lowest third of wages paid in an occupation. This is an imputed wage measure rather than a surveyed measure.

### Metropolitan Statistical Area (MSA)

A county or collection of adjacent counties with a minimum population of 100,000, and with a city or urbanized area of 50,000. MSAs are officially designated by the U.S. Office of Management and Budget. Currently, there are two MSAs in Idaho: the Boise City MSA made up of Ada and Canyon Counties, and the Pocatello MSA consisting of Bannock County.

### Middle Range

All wages reported in an occupation for each worker reported are arrayed from lowest to highest. The middle 50 percent of the workers is the middle range. This means that one-fourth of the employees are

earning wages below the low end of the middle range and one-fourth of the employees are earning wages above the high end. This range provides the user with information regarding the variance of pay within an occupation.

### Midpoint (Median) Wage

All wages reported in an occupation for each worker are arrayed from lowest to highest. The wage of the absolute middle worker in the occupation is the median wage or midpoint. One-half of the workers in the occupation earned wages below the midpoint, the other half earned wages above the midpoint.

### Occupation

A set of activities or tasks that employees are paid to perform. Employees that perform essentially the same tasks are included in the same occupation, whether or not they are in the same industry. Some occupations are concentrated in a particular industry; others may be found in a majority of industries.

### Survey Code

The numerical code to identify an occupation and its relation to other occupations in the survey. This is the fourth consecutive year the current classification system has been used for the survey. Read more about the way occupations are grouped together in the next part of this introduction.

### Wage

Includes all of the following as wage (pay) for use in this survey: Base Rate, Commissions, Tips, Deadheading Pay, Guaranteed Pay, Hazard Pay, Incentive Pay, Longevity Pay, On-call Pay, Piece Rate, Portal-to-Portal Pay, Production Bonus, and Cost-of-Living Allowance.

Excludes all of the following as wage (pay) for use in this survey: Attendance Bonus, Back Pay, Draw, Holiday Premium Pay, Jury Duty Pay, Lodging Payments, Meal Payments, Merchandise Discounts, Nonproduction Bonus (Holiday Bonus), Overtime Pay, Perquisites, Profit Sharing Payment, Relocation Allowance, Tuition Repayments, Severance Pay, Shift Differential, Stock Bonuses, Tool Allowance, Vacation Pay, Weekend Pay, and Uniform Allowance.

## More About the Survey

---

### Selecting the Sample

An industry employment-size stratification method was used to select the sample of firms. With this method, large firms represent themselves in the wage estimates, while smaller firms represent both themselves and a number of other similar-size companies in the same industry.

In cases where the employer had multiple units, the employment at each worksite was used in the stratification.

### Data Collection Methodology

The survey form used to collect employment and wage data is a structured, uniform collection document provided by the U.S. Department of Labor, Bureau of Labor Statistics. The same form is used in all states and territories to collect similar data, making the survey comparable between states.

For some large companies, data was collected via personal visit, but the bulk of the survey effort was conducted by mail. Mail and telephone follow-up contacts were made to non-responding companies. Technical procedures are available on the Bureau of Labor Statistics Internet site at <http://stats.bls.gov/oeshome.htm>

The collection document included definitions, supplement of job titles, and job duties. Employers were encouraged to match not just the job title, but also the duties of their workers with the job duties listed in the definitions supplement.

Employers were asked to report the number of employees by occupational classification and by pay range. Only wage and salary-type compensation data are included in the survey results; fringe benefit costs, overtime, production bonuses, incentive pay, and other non-wage earnings are not included.

### Timeliness

Accurate and reliable wage surveys take time to conduct. The sample must be designed and selected, data must be collected, coding and editing must be completed, analysis must be conducted, and results

must be published. The data for the current panel of this survey was collected between November 2003 and June 2004. The U.S. Department of Labor, Bureau of Labor Statistics then processed the files in combination with data from the 2000, 2001, and 2002 surveys. These files were returned to states in November 2004 for publication.

Historically, wages do not change quickly. However, occupations and industries that are growing faster than average are likely to experience rapidly changing wages. For some high demand occupations, especially in the information technology and skilled health care fields, wages have grown at a faster rate than other occupations.

---

## Understanding & Using Wage Information

---

Wage information is essential to employers, employees, and everyone else who participates in the labor market. Employers use the data to determine whether they are paying their workers a competitive wage, to build wage and salary administration structures, to recruit workers, to find locations where new business operations may be successful, and to maintain internal equity among current workers in an occupation.

Job seekers, students, and other individuals use wage data to make decisions about jobs or careers, to negotiate job offers or promotions, to make relocation decisions, and to decide which educational programs to pursue. Researchers use wage data to analyze trends, and managers use it to design and implement policies.

### Matching the job with the survey

There is no single right wage rate for an occupation. The economy and the supply and demand of the job market determine the wage an employer is willing and able to pay an employee. The individual employee decides whether or not to accept the wage offered for the job.

Companies differ considerably in the products or services produced, working conditions, size, location, and complexity of work required for different jobs. There are also significant differences between the skills, education, experience, and abilities of employees within each occupational classification. Because of these differences, there is typically a wide range of wages actually paid for a single occupation. The "right" wage for a job is the one that matches the individual employee's com-

pensation with the work to be performed and the industry, not merely the average surveyed wage.

Therefore, the best way for an employer, an employee, or a job seeker, to match a job with a wage is to match the skills and responsibilities of the job with the skills and responsibilities defined for the surveyed occupation.

All employers do not use the same set of definitions and titles for jobs so it is important to use the definition of duties rather than just the titles to match and compare wage rates. Job definitions are included in the *Glossary of Standard Occupational Classification (SOC) Job Titles and Definitions*. (To obtain a copy, call (208) 332-3571 or 1-800-772-2553. The *Glossary* is also available on the Internet at [http://www.bls.gov/oes/2002/oes\\_stru.htm](http://www.bls.gov/oes/2002/oes_stru.htm)

If an occupation is not listed in the survey tables, it may not have been included in the survey because many job titles are employer-specific. The occupation also may not appear when the level of employment was too low to derive a reliable wage estimate, or when publication of wage rates may have disclosed information for an individual firm.

If the exact title can not be found, the next step is to benchmark your job with one that is included in the survey. To do this, use wage data for an occupation with a job definition that has similar skills, knowledge, and responsibilities or look for the occupation within the next larger geographical area.

### **Using Middle Range Wage Information**

It is possible to make some assumptions about the middle range wage data to assist you in determining whether a wage for an occupation is competitive in the labor market. For example, less experienced workers may be receiving pay closer to the low end and more experienced workers may be receiving pay near the high end. The pay for some occupations is very sensitive to area, size of company, type of company, or duties the workers are actually performing. These variables may cause the middle range wages of an occupation to be very broad.

---

### **While Using This Data...**

---

Keep the following points about this wage survey in mind:

- ◊ Idaho Commerce & Labor has provided several extensions to the official OES data series (which have been developed in cooperation with the Bureau of Labor Statistics). These additional products have not been validated by BLS and are not, therefore, official BLS data series. Idaho Commerce & Labor feels, however, that they provide additional information that is useful to the users of Idaho's data.
- ◊ Differences in the way employers perceive the job definition or job title sometime lead to differences in the information reported on the survey.
- ◊ Wages may vary by area within Idaho. Even in the same geographic area, wide ranges of pay rates for the same occupation are not uncommon. These differences stem, in part, from the degree of competition for workers.
- ◊ The higher the level of skill, education, and/or training an occupation requires, the broader the labor market area of recruitment. For example, the labor market for engineers may not be confined to the boundaries of Idaho, but may be regional, national, or even international, depending on the special skills required. On the other hand, the labor market for low-skill occupations is typically localized because workers may not wish to commute long distances or relocate for low wage jobs.
- ◊ Wage information in this publication is based upon actual wages paid. It measures only the amount paid to the workers of those companies included in the survey at the time it was conducted. This information is not absolute; it is the calculation of wages generated by a statistically valid survey.
- ◊ Occupations which report less than 30 employment or a wage that is considered confidential are not included in the publication.

- ◊ When comparing, evaluating, and using wages it is important to consider both the average and median wage. When these two measures are similar, it can be assumed that the distribution is close to normal, thus it is a valid indicator of the actual wage being paid in that occupation.
- ◊ Idaho Commerce & Labor has used wage updating factors, for later time periods, to further update the data from all three survey years to a more current time period, subsequent to the most recent OES Survey reference period—2004. As a result, wage-updating factors have been applied to all the data included in these estimates. The updated data contained in this report are not official Bureau of Labor Statistics data series, nor have been validated by BLS.
